

Lecture VIII - Data Visualization

Programming with Python

Dr. Tobias Vlček

Quick Recap of the last Lecture

Data Visualization

- Data visualization is the process of creating visual representations of data
- It allows us to understand the data in a more intuitive way
- It helps us to identify patterns, trends, and outliers in the data

Beautiful Plotting

- There are many libraries for data visualization in Python
- Some of the most popular libraries are:
 - Matplotlib
 - Seaborn
 - Plotly
 - Bokeh
 - Altair
 - GeoPandas
 - Geoplot
 - Geoplotlib
