

Episode 9 — The Pitch Deck

Programming with Python · Tutorial 09

The pitch meeting is Friday, and the investor gave one instruction: “**Bring me charts I can’t argue with.**” Last week you turned the data room into honest numbers; this week those numbers have to be *seen*. Same eighty orders, same `orders` DataFrame, now with a picture attached. You’ll draw a line for revenue over time, pick the right chart for categories, distributions and relationships, and (the real skill) refuse to draw a dishonest one. Kevin has already “built the deck”, and his growth slide is a lie wearing a nice axis. Your job is to **supervise**: catch the chart you can argue with before the investor does.

Work on the notebook

[Open in browser](#)  Open in molab

Open in browser (recommended): runs entirely on your machine, in this tab: no account, no installation, and after it loads no internet is needed.

If the notebook won’t boot

This lab loads pandas **and** matplotlib, both fetched over the network the first time. If the notebook fails to boot with a network error, or the first cell that imports one of them complains it can’t be imported, **reload the page once** (Cmd/Ctrl + R). That almost always fixes it.

How your work is saved (read this once)

Your progress lives **in this browser tab**. If you **reload** the page (Cmd/Ctrl + R) your work is still there. But if you **close the tab and open the link again later, you start from a clean notebook**. There is no cross-device sync in the browser, and clearing browser data or private mode also wipes it.

So: **download your .py before you leave** (menu → Download → *Download Python code*). That download is the *only* guaranteed copy. Handing in files works exactly like this in the checkpoints, so you get to practice the motion every week. Note: a downloaded `.py` is for submission and backup. You can’t upload it back into the browser editor.

Open in molab: marimo’s free cloud (account required). Your copy saves to your account and reopens on **any device**. Choose this if you know you’ll switch computers or want to be certain nothing is lost. Optional: nothing graded ever requires it.
