

Episode 1 — The Founding

Programming with Python • Tutorial 01

Your food-delivery startup exists as of today. It has no name (that's your first job), no menu (your second), and a co-founder, Tobi, who has already spent 300 EUR on stickers. In this notebook you set up prices, calculate the first revenues, and decide whether Tobi's 9.99-for-everything pricing theory survives contact with arithmetic.

Work on the notebook

[Open in browser](#)  Open in molab

Open in browser (recommended): runs entirely on your machine, in this tab: no account, no installation, and after it loads no internet is needed.

! How your work is saved (read this once)

Your progress lives **in this browser tab**. If you **reload** the page (Cmd/Ctrl + R) your work is still there. But if you **close the tab and open the link again later, you start from a clean notebook**. There is no cross-device sync in the browser, and clearing browser data or private mode also wipes it.

So: **download your .py before you leave** (top-right notebook menu → Download → *Download Python code*). That download is the *only* guaranteed copy. Handing in files works exactly like this in the checkpoints, so you get to practice the motion every week. Note: a downloaded .py is for submission and backup. You can't upload it back into the browser editor.

Open in molab: marimo's free cloud (account required). Your copy saves to your account and reopens on **any device**. Choose this if you know you'll switch computers or want to be certain nothing is lost. Optional: nothing graded ever requires it.
